DETAILED ACTION

Notice to Applicant

1. This communication is in response to the RCE filed 6/22/09. Claims 1-42 have been cancelled. Claims 42-43 and 57 have been amended. Claims 42-58 are pending.

Allowable Subject Matter

2. Claims 42-58 are allowed. The following is an examiner's statement of reasons for allowance and in light of Applicant's arguments.

Independent claims 42, 50, 53 and 57 are directed to "establishing, in a computer, a relationship between various drivers by representing at least one non-bridge variable driver in terms of one or more of said bridge variables; using said relationship, representing activities at least as a function of one or more of said bridge variables, thereby reflecting interdependence between said activities to represent the entire series of activities of said process, in a computer; generating, in a computer, a model of said process at least as a function of said bridge variables by combining representations of activities comprising said process; and outputting, from said model in a computer, a predictive metric reflecting an efficiency of the total process".

The closest prior art of record: Myers (2002/0198808) discloses supply chain financing.

Bruce (2002/0049621) discloses decision dynamics.

Morgan et al. (5,799,286) discloses automated activity-based management system.

Ulwick (6,115,691) discloses computer based process for strategy evaluation and optimization based on customer desired outcomes and predictive metrics.

However, the combination of Myers, Bruce, Morgan and Ulwick fails to teach/suggest "establishing, in a computer, a relationship between various drivers by representing at least one non-bridge variable driver in terms of one or more of said bridge variables; using said relationship, representing activities at least as a function of one or more of said bridge variables, thereby reflecting interdependence between said activities to represent the entire series of activities of said process, in a computer; generating, in a computer, a model of said process at least as a function of said bridge variables by combining representations of activities comprising said process; and outputting, from said model in a computer, a predictive metric reflecting an efficiency of the total process", as recited in claims 42, 50, 53 and 57 above.

Claims 43-49, 51-52, 54-56 and 58 incorporate the features of claims 42, 50, 53 and 57 through their dependencies, and are also allowed for the same reasons given above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
